

**DYNAMIC PROXY RECONFIGURATION METHOD
TO SUPPORT SHARING OF EXTRA CAPACITY**

ABSTRACT

5 A method directed to a dynamic proxy reconfiguration
which is implemented in plural network servers. The
invention is directed to a computer-executable program for
use in proxy network servers which enables each proxy
server to dynamically sell its unused capacity to other web
sites for specific periods of time. The invention has
10 particular utility in connection with World Wide Web
servers, but can be used with other servers where proxy
servers may be present.
